CERTIFIED SIZING

Force360 has certified the sizing of their glove range to AS/NZS 2161.2:2005 and EN420:2003.

Glove sizing chart should be used as a guide always wear actual glove sample in order to confirm correct sizing.

The Force360 Glove Range

Until now almost every glove in the Australian market claims compliance to EN388 for Mechanical Scores and a few may claim compliance to EN420 for General Requirements.

Compliance claims are simply not reliable. Factories can change materials or production standards, and glove brands can even change factories. There isn't even an obligation to batch test product, or audit manufacturing when simply claiming compliance to EN388 and EN420.

Force360 have recognized the weakness in such compliance claims and the potential risks it poses to end users and suppliers alike. We have engaged SAI Global to test and certify every aspect of our glove range, from the raw material used, through to design and construction, mechanical scores, and most importantly to the factories manufacturing processes and social compliance practices.
